

NOTICE OF CONSTRUCTION

MCI/VERIZON FIBER CABLE INSTALLATION PROJECT DEERWOOD ROAD, OLD CROW CANYON ROAD, CROW CANYON ROAD, AND CREEKSIDE DRIVE

Planning Construction Period: June 2020 to July 2020

Staff issued an Encroachment Permit to MCI/Verizon's contractor, Golden State Utility Company (GSUC), for the installation of approximately 11,400 feet of new fiber cable along Deerwood Road, Old Crow Canyon Road, Crow Canyon Road, and Creekside Drive. This project is necessary to maintain the MCI/Verizon fiber cable system, as well as upgrade the services for digital cable television, digital telephone, and high-speed data. Details of the Permit issued are as follows:

- Project scope: potholing of existing utilities; seven 4'x4' bore pits; 10 new vault installations; approximately 5,700 feet of directional bore; and placement of approximately 11,400 feet of conduit for fiber installation, including approximately 150 feet of shadow duct along Creekside Drive, per the Reimbursement Agreement for Duct Construction. The City entered into an agreement with MCI/Verizon to install an empty conduit for the City along with their work to provide a reduced cost to implement the City's ITS Master Plan and create fiber connections Citywide to all the signals.
- Limits of work: start at a new vault on the northeast corner of Omega Road and Deerwood Road, continue south behind the curb along the east side of Old Crow Canyon Road to Crow Canyon Road, continue west behind the curb along the north side of Crow Canyon Road approximately 115 feet west of Deerwood Road, cross Crow Canyon Road, continue west behind the curb along the south side of Crow Canyon Road, and end at a new vault on the west side of Creekside Drive approximately 115 feet south of Crow Canyon Road, as shown on Exhibit A.
- Work schedule – June to July 2020
