

DOUGHERTY ROAD RECYCLED WATER FACILITY INSTALLATION

Cal Atlantic Homes has installed a recycled water facility on Dougherty Road (see Location Map). To facilitate the installation of this recycled water facility a change in the traffic lane configuration occurred on the east side of Dougherty Road north of North Monarch Road is necessary.

The City of San Ramon and the Dublin San Ramon Services District (DSRSD) have permitted the installation of four recycled water hydrants along the east side of Dougherty Road to create a water truck filling facility. The recycled water, supplied by DSRSD and paid for by the developer, will be used for dust control and compaction during the grading operations of a new residential community (Faria Preserve) to the west of I-680. The City, DSRSD and the developer support the use of recycled, non-potable water for dust control and compaction to reduce the impact on the potable water supply.

The recycled water filling facility may be utilized for up to one-and-a-half years from its initial installation. After its use, one recycled water hydrant will be left permanently in place for other uses when permitted by the City or DSRSD. Please be aware that the recycled water filling facility will be in use during normal construction hours as allowed by the City:

Monday – Friday: 7:30 a.m. – 6:00 p.m.
Saturdays: 9:00 a.m. – 5:00 p.m.

Please note that travel lanes have been re-striped and lane changes occurred, which may affect:

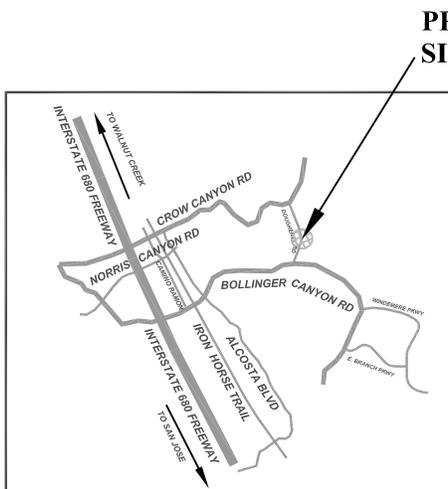

- a change in location of the bicycle lanes away from the curb
- the re-striping of travel lanes to indicate that through traffic must move to the left
- the reservation of the lane closest to the curb for water trucks only during construction hours

It is anticipated that the start date for filling water trucks will begin on Monday, August 29, 2016.
